

FOR IMMEDIATE RELEASE

AUTHENTIUM AND FAST DATA TECHNOLOGY TEAM UP TO CREATE REVOLUTIONARY CONTENT FILTERING SOLUTION

FastTracker's Unique Graphical Analysis Approach Allows Employees Unlimited Web Access While Enabling Policy Compliance; Authentium ESP Enables Integration With Other Best of Breed Solutions, Plus Scaleable Deployment to Millions of Small and Medium Business, Enterprise, Government and Education End Points.

Boulder, Colorado; West Palm Beach, Florida; November 13, 2005 – Fast Data Technology, a leader in Internet content control and analysis technology, and Authentium, Inc, the leading end-point security service integrator, announced today the integration of FastTracker for ESP – a modular web content monitoring solution designed to integrate with the Authentium Extensible Security Platform and enable Human Resource executives and network administrators to increase productivity and decrease liabilities caused by unauthorized browsing of web content.

The award-winning FastTracker Business Content Filtering and Management Reporting solution provides a revolutionary new approach to the problem of controlling and monitoring employee web site choices and utilizes unique web-based graphical reports, generated by a secure server, to display web browsing data in real time. Tracking data can be accessed through the Authentium ESP common console. Layered security and permissions enable administrators to maintain each end user's privacy, and segment monitoring by team, group, division, business unit, or of the whole company, across multiple locations. Crucially, FastTracker for ESP enables organizations to

measurably increase employee productivity and reduce workplace policy compliance risks.

Authentium ESP includes integrated security application modules from multiple best of breed developers, such as award-winning antivirus, antispymware, personal firewall, anti-phishing, content filtering, and pop-up filtering modules.

“We’ve seen a recent surge in service providers seeking to serve their SMB and Enterprise customers with content filtering solutions designed to help them increase productivity and enforce company web use policies,” said Marlena Rich, Director of Business Development at Fast Data. “This partnership with Authentium is ideal because it makes FastTracker functionality accessible to a broader range of businesses, schools and government networks, and permits integration with other methods for defense in depth and parallel management of legacy solutions.”

“We’re committed to providing an integrated, “best-of-breed” approach to end point security,” said John Sharp, Chairman and CEO of Authentium. “In a world of compliance-related liabilities, FastTracker for ESP puts real teeth into an organization’s Internet-use policy. FastTracker combines unlimited web access with powerful monitoring capabilities, allowing the workplace to work together to manage unauthorized browsing. FastTracker for ESP is a wonderful addition to the platform.”

The Authentium ESP Extensible Security Platform enables organizations to procure, configure and deploy integrated “best of breed” security applications on employee desktops and laptops. Authentium technology currently protects over 18 million e-mail accounts and more than 9 million corporate, education and ISP end points. The ESP common console, called the ESP Enterprise Security Manager, is available to educators, enterprises and small to mid-sized businesses to provide endpoint security, improve productivity and to allow enforcement of critical policies on their networks.

About Authentium

Based in West Palm Beach, Florida, Authentium develops core operating system encapsulation, file and application defense, data interception and data analysis technologies for inclusion in its flagship Extensible Security Platform (ESP). Authentium

is the leading licensor of security software development toolkits to independent software vendors, software publishers, and security appliance manufacturers, and one of the fastest-growing privately-held companies in the security software industry, providing services to millions of end users in enterprise and government organizations, ISPs, and education institutions worldwide.
